Auto Glass Technician's 40-Piece Screwdriver Set

Everything you need in an easy-to-carry, convenient set. This high-quality American-made screwdriver set comes with Phillips, slotted, Allen, square, Torx®, POZIDRIV® bits, and clutch bits. It also has a socket adapter so you can use 1/4" sockets and a bit holder that can be put in a power drill/driver so you can use all bits in a power tool.

FPC705

Equalizer® Magnetic Screwdriver

This screwdriver is perfect for reaching deep inside doors or in hard-to-reach areas. Our Magnetic Screwdriver has a steel shaft and stainless steel bit holder. Handle is 1-1/4" in diameter. Comes with one #2 Phillips bit. Made in the USA.

EPB760 • 8 Inch

EPS761 • 11 Inch

Magnetic Screwdriver Shafts

We offer two size shafts that will fit into your screwdriver and let you reach deep into any door to install any screw. Made with a steel shaft and a stainless steel magnetic bit holder.

S767 • 5" Long

S768 • 8" Long

Phillips Insert Bits

EPB762 • Phillips #1

EPB763 • Phillips #2

EPB764 • Phillips #3

Mini Stubby Screwdriver Set

Working inside doors, under cowlings or in any tight spot can be very difficult without a stubby screwdriver. Our Mini Stubby Screwdrivers have a shaft made of chrome vanadium steel, measure 1-1/2" long. Includes one each 3/16" and 1/4" slotted screwdrivers and one each #1 and #2 Phillips.

KFS643

ThreadMate™

Universal Thread Repair Tool

Universal for both inches or metric threads and quickly adjusts from 5/32" to 1/2" (4 mm -13 mm). Automatically traces the existing thread pitch. Repairs right-hand threads with tool as supplied and simply switch blade position for left-hand threads.

TMT821

Angle Screwdriver

It can be very difficult to remove screws that are under hoods and behind fenders. Our Angle Screwdriver has a thumb brace that allows you to swivel the driver to any angle and use your thumb to keep it from rotating while you remove a screw. Comes with six screwdriver bits: one each #1, #2, #3 Phillips and one each #3, #5, #8 slotted. Made of the highest quality materials to last a lifetime. Made in the USA.

AW1026

98091

Fold-Up Hex Key Sets

Our hex keys fold up into a compact storage handle that is easy to locate. Made in the USA. The **inch hex keys** have the following sizes: 5/64", 3/32", 7/64", 1/8", 9/64", 5/32", 3/16", 7/32", 1/4"

98027

The **metric hex keys** have the following sizes: 2mm, 2.5mm, 3mm, 4mm, 5mm, 6mm, 8mm

98091 • Inch
98027 • Metric

Torx® Key Set

Our Torx® Key Set folds up into a compact storage handle so it is easy to carry in your toolbox or slip into a tool pouch. Our Torx® keys have the following sizes: T10, T15, T20, T25, T27, T30, T40. Made in the USA.

98057

Torx® T45 & T50 Bits

With 3/8" Drive

These bits work on the most common size screws used to hold seat belts and trim panels in place, but can also be used many other places on a vehicle. If you ever do any mechanic work you are aware these are also commonly used on brake calipers, manifolds, seats, and bearing assemblies. The T45 and T50 are two bits that you should always have in your toolbox, as you are sure to find endless uses for them.

T45

T50

T4550 • Set of One Each

T45

T50

Super Torx® Bit Set Ratchet Drive

If windshields were all you installed you would never need most of these Torx® bits, but as technicians we must also install quarter glasses. To install quarter glass it is often necessary to remove seats, interior quarter panels, and even seat belts. Most of these are held in place by a Torx® bit. On very large Torx® bits you cannot get the leverage with a small ratchet, so we offer the Super Torx® Bit Set which has the appropriate size ratchet drive for the bit. Sizes included in the set: T-60 with a 1/2" ratchet drive, T-55, T-50, T-47, T-45, T-40 each with a 3/8" ratchet drive, and T-30, T-27, T-25, T-20, T-15, T-10 each with a 1/4" ratchet drive. Each set comes in a molded, soft plastic container that holds each Torx® bit in place. Made in the USA.

- 1 • SSC209 • Equalizer® Super Size Vacuum Cups (Set of 2)
- 1 • TW1442 • Equalizer® HEADLIGHTS™ Safety Glasses

Basic Technician Kit

Most people who start training to become an auto glass technician already possess a small set of tools. Usually they have a Phillips and straight screwdriver, wrenches, and hopefully a set of metric and inch size sockets. This kit is intended to build on that set of tools and make it into a set of tools for an Auto Glass Technician. We developed this kit by asking some of the most respected technicians in the country to give their feedback on what should be included in a basic technician kit. There were many variations, but the tools that are included in this kit are the ones mentioned most by those technicians. We also realize there are other items (including power tools) you might like to add to this tool kit. For this reason, you can pick any item to add at the time of purchase and deduct 10% from the cost. However, no substitutions of the tools included in this kit are allowed.

- 1 • JVT193 • Two Vacuum Cups
- 1 • PDT443 • PryDaddy™ Tool Set
- 1 • AG1010 • 4 oz. Cutting Oil

Specialty Flat Glass/Glazing Kit Upgrade

If you are expanding your service to include flat glass/glazing, you'll want to add on to the auto glass tools you already have. We developed this kit by asking some of the most respected technicians in the country to give their feedback on what should be included in a specialty flat glass/glazing kit. There were many variations, but the tools that are included in this kit are the ones mentioned most by those technicians. We also realize there are other items (including power tools) you might like to add to this tool kit. For this reason, you can pick any item to add at the time of purchase and deduct 10% from the cost. However, no substitutions of the tools included in this kit are allowed.

FGK701

Hook & Pick Set

One of the things most technicians do not have is a good set of fingernails. For that reason it is often difficult for us to get leverage on an item that fits tightly against another. Our Hook & Pick Set comes in four different configurations to help you get under and pry up the smallest items. The straight pick also works great when you are trying to align small holes.

HTS923 • Set of 4

Equalizer® LongHorn Seat Release

Invented by: Calvin Ray Fuller

Some 2004 and newer Ford F-150 pickups have bolted-in back glasses. On these models you must remove the rear seat and mouldings surrounding the glass so that you can remove it. A good rule of thumb any time you are trying to remove a back glass without breaking it (even if it is not bolted in) is to remove the rear seat, mouldings and trim to make it easier to cut the glass out. Most of the work on an F-150 is straightforward, but the rear seat has a hidden latch that must be released before the seat can be removed. Not only is the latch obscured from normal vision, but it's also at a difficult angle to access. Our LongHorn Seat Release Tool is designed to straddle the catch so that the tool will not slip off to one side. You then push the latch back to release the catch and the seat can be removed.

JFT323

Hose Removal Pliers

Saving the hose that runs to the windshield wipers can be difficult, especially on older vehicles where the hose is old and brittle. With our Hose Removal Pliers, all you have to do is position the tool against the hose, so the black (gripper) side sits over the metal tube, and squeeze. The hose is pushed off quickly and without damage.

HRT367

Multi-Purpose Leverage Tools

These flexible tools range in size from 5 to 7 inches long and are tapered to a thin tip. This design allows for leverage in hard to lift places, such as the moulding, cowl, or door panels. Once you've used one of these tools to access the problem area, then use the necessary tool to finish the job.

BWT233 • Package of 3

Lock Out Kit

With this kit you can open most vehicles on the market. The kit has been redesigned and improved since it was first introduced in 1975, and is in use in thousands of shops all over the world. Our Lock Out Kit contains: a slide lock button tool, dual release tool, narrow release bar, wide release bar, JapanEASY tool, Wonder Tool, knob grabber, gas cap key, nylon wedge, and a 50-page instruction manual. Made in the USA.

MK201

Antenna Removal Wrench

Many technicians set a windshield from the passenger side. One problem with doing this is that the antenna can be in the way. This handy little tool has a notch cut into the side that will fit most antennas so you can quickly unscrew them and get them out of the way. Antennas are sometimes broken along with the windshield and technicians are asked to replace them. This wrench fits the four most common foreign and domestic antenna retaining nuts. It eliminates damage and makes the removal and replacement of these nuts quick and simple.

21600

Digital Pocket Hygrometer/Thermometer

We all know urethane should be cured before a vehicle is driven. Someone's life may depend on the retention of the windshield. Protect yourself and your customer by knowing the temperature and humidity. Set our hygrometer on top of the vehicle you are working on, wait 10 seconds and it will record the temperature and humidity. It has a temperature range from 32°F to 122°F (0° to 50°C) and a hygrometer (humidity) range from 20% to 95% (temperature compensated). Guaranteed reliability. Each hygrometer/thermometer comes with a traceable certificate of calibration. This certificate lists all test information on the unit you are purchasing. Urethane manufacturing companies have charts available that show how long it will take humidity-cured urethanes to cure at a certain humidity and temperature level. This is important so that you can explain accurate, reliable and safe drive-away times to your customer.

HM374

Mechanical Pick-Up

Many technicians have a small telescoping magnet in their toolbox, which is a wonderful tool to have when picking up small metal items. However, occasionally you will need to pick up an item that is non-ferrous. Small plastic pieces and many of the metals used in vehicles today are non-ferrous, and a magnet does not attract them. It is times like these when you need our Mechanical Pick-Up. It is designed with steel fingers that are spring-loaded and will grip an item up to 1" in diameter. The closed diameter of the "jaws" is less than 3/8". The Mechanical Pick-Up is 24" long, has a flexible shaft and will reach into the deepest recessed areas to retrieve an item. Also features an LED light for when you need to see in those dark hard to reach places. Uses 3-LR41 batteries (included).

NMT448

Telescopic Magnet

Have you ever been under the hood of a vehicle or working inside a door on a glass and dropped a screw? You could see it, but you could not reach it.

The Telescopic Magnet extends to 24" in length to get to those really hard-to-reach places and collapses to only 4-3/4" long to easily store in your toolbox or even fit in your shirt pocket. This powerful magnet can lift up to 2 pounds, allowing for a wide variety of other uses. Made in the USA.

MT690

FlexLight

FlexLight has a 9" flexible shaft that stays bent in any direction, even around corners, so you can shine light directly where it is needed. The FlexLight can be used to find lost screws inside doors or under hoods. It may be one of the handiest tools you own. It operates on two AA batteries (not included).

FL203

FLB232 • Bulb And Flexible Shaft Assembly

FlexLight's flexible shaft will stay bent in any direction.

Insta Etch System

The Insta Etch System is the perfect addition to any glass shop or mobile glass business. This easy to use, downloadable handheld device can be used to produce VIN security marks for customers or etch a company's logo and contact information into the glass. Just print out the stencil from the handheld device, apply activator to the glass, place stencil on the area of the glass to be etched, then using your nitrile gloves apply the acid gel. After allowing 5-7 minutes for the etching process to complete, just remove the stencil and clean the glass. Now you have a professional and durable glass etching, all in less than 10 minutes! This is a profitable add-on service for any technician, and a truly turn-key system for the 21st century installer. Each Insta Etch System Includes: (1)-1650 Series 180dpi downloadable handheld stencil printer with USB cable and CD ROM software, (2)-8 ml activator, (2)-1" wide stencil cartridges (each 10 feet long), (1)-30 ml acid gel bottle, (1)-instant cleaning sponge, and (2)-pair of chemical resistant nitrile gloves. All in a durable plastic carry case. Enough materials to etch over 120 VINs!

KFE1650

Completed Etched VIN

Insta Etch Accessories

- KSA862 • 8 ml Activator Spray**
- KSB863 • 3/4" Wide Stencil Cartridge**
- KSC864 • 1" Wide Stencil Cartridge**
- KGA866 • 30 ml Acid Gel Bottle**
- KGP865 • 3.75 ml Acid Gel Pen (not shown)**

Telescoping Hood Holder

On many older vehicles it is common to find the hood holder damaged or missing. Body shops are notorious for leaving these off until the vehicle is completely repaired. When this happens, you must find a way to hold the hood up while you remove and replace the cowl. It is at this precise minute that you cannot find a broom, mop, tree limb or anything else to hold the hood up! Put one of these expanding hood holders in your toolbox and you will never have this problem again. Collapses to 20" in length and will expand up to 47" long. Made in the USA.

THH312

Gas Lifter Locking Device

Over a period of time, the gas lifters that hold the hood up on a vehicle can go bad. When you open the hood, the gas lifters will not hold it up. This small, easy-to-use device solves that problem. Raise the hood or lift gate and attach the lock to the metal rod on the gas cylinder. It will stay in place until you are finished with the job. A bright fluorescent flag alerts you that it is still in place when the job is finished.

PJ1257

Can Organizer

Cans are the hardest thing to organize. They roll around, make noise, will not stay in one place, and are generally just annoying to deal with. Mount this unit on the wall of your mobile vehicle and you have the problem solved. Has five slots and is made of heavy duty plastic.

CO1396

Fractional Measuring Tape, 25' Long With 1" Wide Blade

Finally somebody made a measuring tape that is easy to read! How many times have you counted the little marks to see if it was 1/4", 3/8" or something else? The fractional measuring tape has every 1/8" marked so if it is between 3/8" and 1/2" it is 7/16". It has the locking hold function, is made with a polymer-coated blade for long life, and has a durable, textured case for non-slip grip.

CH1064

Soft Rubber Hammer

Sometimes a little "gentle persuasion" with a hammer is the only way you can make an item fit. Most rubber hammers are actually quite hard and can easily damage a vehicle. Our hammer is made of Sorbothane®, a viscoelastic polymer, that is less likely to damage the vehicle. It is so soft you can take the rubber part between your thumb and forefinger and compress it.

SRH707

So soft you can squeeze it with your fingers. Try this with a regular rubber hammer.

Olfa® Multi Purpose Scissors

OLFA® 7" serrated edge scissors are designed to cut some of the toughest materials, even Kevlar®. Extra sharp stainless steel blades are sharpened to the tip for precise cutting and the serrated edge helps prevent slippage of the materials being cut. Right or left hand use.

MPS811

Heavy-Duty 3-Drawer Toolbox

The external shell of this toolbox is made of heavy-duty, high-impact polypropylene resin with molded-in color. It has a large storage area on top and three durable steel drawers with full-extension slides that lock when the lid is closed. It measures 23" wide, 13-1/2" deep and 10-1/2" tall.

HP2331
